CORPORATE OVERVIEW & DIRECTOR'S REPORT

1. Principal Activities & Operating Framework

Biomass Traders Private Limited completed its second full financial operating cycle on March 31, 2026. The company remains focused on bulk supply chain aggregation, processing, and domestic B2B distribution of structured solid biofuels. Our primary operations center on converting unorganized agro-waste matrices into industrial-grade paddy husk briquettes and specialized mustard straw pellets, satisfying the thermal requirements of multi-sector boilers across southern and central India.

2. Operational Performance Highlights

During the financial year 2025-26, the company successfully scaled total supply chain material volume to **42,500 Metric Tons (MT)**, representing a clear performance ramp-up driven by extended off-take supply patterns established with heavy industrial manufacturing partners. Growth execution milestones achieved during the period include:

- **Supply Chain Scalability:** Solidified long-term aggregation network locks across primary farming sectors in Telangana and Andhra Pradesh, minimizing open-market seasonal procurement friction.
- **Storage Optimization:** Deployed high-density weatherized regional field centers near logistically critical distribution nodes, reducing product degradation metrics by 4.2% annually.
- **Client Penetration:** Secured structured, year-round volume absorption mandates with continuous-process industrial installations, insulating aggregate ledger structures from isolated transactional adjustments.

3. Future Outlook & Strategic Roadmap

Moving into FY 2026-27, management is targeting an expansion of logistics routes to capture expanding industrial manufacturing hubs across neighboring states. Capital deployment priority will transition toward semi-automated distribution routing and expanding working credit limits to confidently service larger capacity requests on contract intervals.
